Swift is a cool language, but the syntax and semantics is really bad at times. We need a tool that translates swift code to some of the other languages and then allow to write that code in a code-minimal way. Let us use the language that fits best. I also love Rust. Rust has a pretty good syntax and semantics. Compiler errors are also useful as they make you aware of your mistakes. But it is not as productive as swift. I don't know about C#. I hear it is very easy to write code in C#, so I expected a more productive experience. However, this is what I get from the swift project. [Where should I start?]. This article
